

SENIOR SOFTWARE ENGINEER | LEGACY MODERNIZATION DEVELOPER

COBOL • SAS • MAINFRAME INTEGRATION • ENTERPRISE MODERNIZATION

Senior Software Engineer with experience supporting enterprise government and healthcare systems using COBOL, JCL, SAS, TSO/ISPF, CICS, VSAM, and IBM mainframe technologies. Experienced in systems analysis, batch processing, data integration, software maintenance, testing, and modernization initiatives.

Former GS-12 Computer Specialist supporting Medicare and Medicaid systems, with experience integrating legacy mainframe environments with modern web, database, cloud, and API technologies.

CORE SKILLS / EXPERTISE

- **Legacy Mainframe:** COBOL, JCL, SAS, TSO/ISPF, CICS, VSAM, Syncsort, MVS/ESA IBM 3090
- **Legacy Modernization:** Systems Analysis, Batch Processing, Data Integration, Migration, Production Support
- **Full-Stack Development:** Java Spring Boot, REST Services, PHP/Laravel, JavaScript, React, TypeScript, Bootstrap, Node.js
- **Backend & APIs:** REST APIs, SQL, MySQL, PostgreSQL, Oracle, Linux, Apache, LAMP
- **Cloud & DevOps:** AWS EC2, Docker, Jenkins, CI/CD, Git
- **Testing & Troubleshooting:** PHPUnit, Jest, JUnit, TDD, Full-Stack Debugging
- **Leadership:** Mentoring, Technical Training, Agile Collaboration

RELEVANT MAINFRAME EXPERIENCE

Office of Inspector General, Health Care audits (07/1990 - 07/1998, 8 years) Computer Specialist GS-12, Series 334

- Provided technical leadership and systems analysis support for healthcare audit initiatives.
- Developed SAS programs to extract, analyze, and report Medicare and Medicaid data used to identify fraud, abuse, and misuse.
- Designed SAS datasets and developed JCL and Syncsort processes for large-scale data extraction and reporting.
- Analyzed and revised COBOL programs supporting Medicare and Medicaid audit systems.
- Utilized TSO/ISPF, CICS, VSAM, SAS, and IBM mainframe technologies to support data analysis.
- Led data integration and migration efforts between mainframe and desktop environments.
- Authored technical documentation, operational procedures, and program specifications.
- Delivered technical training and user support on database systems and software applications.
- Served as liaison with CMS database managers, ensuring timely access to Medicare and Medicaid data reports.

Center for Medicare and Medicaid Systems(CMS) (3 Month contract), Senior SAS Developer

- Guided a team in migrating data from PC SAS to Mainframe SAS to address storage limitations.
- Authored JCL to support migration from PC SAS to Mainframe SAS environments.
- Utilized TSO/ISPF, CICS, VSAM, and COBOL analysis to support application enhancements and troubleshooting.
- Developed a Microsoft Access-based Pre-Vetting Audit Tracking System database.

Bode Technology (2 Month contract) SAS Developer

- Optimized existing PC SAS scripts to increase the efficiency of DNA data matching processes, improving performance in crime investigation analyses.

Enterprise Modernization & Software Engineering Experience

Mango Peel (August 2023 – present), Software Engineer & E-Commerce Automation Specialist

- Developed software automation solutions using Python, OCR, AI-assisted development tools, and e-commerce workflow automation.
- Engineered eBay bulk-listing transformations.

Sol-Ark (July 2022 – August 2023), Senior Full-Stack Developer

- Led development of enterprise applications using PHP, Laravel, React, MySQL, and REST APIs.
- Designed optimized MySQL schemas, indexing strategies, and stored procedures.
- Built REST APIs supporting cloud, embedded, and internal business systems.
- Developed IoT APIs supporting solar inverter monitoring platforms.

- Managed AWS deployments (EC2, Docker, CI/CD), Apache server configurations, and performed advanced Linux environment tuning.

CodeCraft Mentoring (May 2021 – July 2022), Coding Expert and Mentor

- Mentored junior developers, in PHP, Java, C++, and JavaScript, and communicated technical concepts to diverse audiences.
- Developed Java-based student assessment solutions using Maven.

U.S. House of Representatives, (July 2020 – April 2021), PHP/LAMP Developer

- Enhanced enterprise PHP/LAMP application supporting payroll and financial workflows.
- Improved UI/UX functionality using PHP, JavaScript, jQuery, and DataTables.
- Migrated WordPress functionality into a custom PHP MVC framework.
- Optimized database performance and resolved complex full-stack production issues.

Pioneering Evolution, (August 2019 – April 2020), Full Stack Developer

- Enhanced NAVSEA financial applications using Laravel, AngularJS, TypeScript, and JavaScript.
- Conducted code reviews, authored test plans, and supported Agile development workflows.
- Utilized Docker and VMware environments for testing and deployment support.

Innovative Core Solutions (March 2019 – August 2019), DevOps & Software Expert

- Managed Linux VM environments using VirtualBox and Vagrant.
- Configured LAMP stacks, Docker deployments, and Apache server environments.
- Applied DevOps practices and automated scripts to streamline deployment and improve server security

OnTrac, (July 2018 – Feb 2019), PHP Developer

- Developed internal business web applications using PHP, JavaScript, jQuery, Bootstrap, SOAP, and RESTful APIs.
- Built real-time data dashboards using dynamic charting and metrics.
- Implemented caching and data-lookup features to improve system performance.
- Wrote unit tests using Jest and PHPUnit, supporting high-quality releases.

ESale Data Solutions (Jan 2017 – July 2018), Software Consultant & Data Analyst

- Analyzed product profitability, pricing trends, sales rankings, and market demand to support data-driven sourcing decisions.
- Developed XPath-based data extraction and automation solutions to improve the speed and accuracy of data collection across multiple e-commerce platforms.

Capital One (May 2016 - Dec 2016), Full Stack PHP Web Developer

- Developed full-stack features using PHP, jQuery, HTML/CSS, and PostgreSQL within a custom MVC framework.
- Designed database schemas, stored procedures, and indexes to improve application performance.
- Created secure PHP-based encryption tools and developed AJAX/REST features deployed to AWS cloud environments.

Leidos (Oct 2015 – Mar 2016), Full Stack PHP Web Developer

- Built and enhanced PHP-based web applications supporting NIH grant workflows, using Javascript, PHP, and CSS
- Implemented OOP PHP components, improving reusability and system structure.
- Developed and tested on IIS/MySQL, troubleshooting full-stack environment issues.

University of Maryland Baltimore, HSHL (Jul 2012 – Jul 2015), Full Stack Web Developer

- Developed and maintained a secure enterprise web application supporting library resource access with LDAP authentication.
- Designed database schemas in Oracle and implemented performance optimization strategies.
- Enhanced UI/UX using JS and jQuery, and troubleshoot complex issues to improve system reliability.

EDUCATION

BS in Computer Science/Psychology / University of Maryland Baltimore County
